

Function

complete the function `f` so that it returns the product of `a` and `b`, you the next cell to test the function

In [1]:

```
def f(a,b):  
    return a*b
```

test the function using the next cell:

In [2]:

```
a=4  
b=2  
  
if a*b==f(a,b):  
    print("correct")  
else:  
    print("incorrect")
```

correct

Complete the function `g` such that the input `c` is a list of integers and the output is the sum of all the elements in the list

In [3]:

```
def g(c):  
    return sum(c)
```

test the function using the next cell:

In [4]:

```
c=[1,2,3,4,5]  
  
if sum(c)==g(c):  
    print("correct")  
else:  
    print("incorrect")
```

correct
