

## Slicing

Use slicing to find the first four elements of the following string:

In [5]:

```
Letters="ABCDEFGHIJK"  
Letters[0:4]
```

Out[5]:

'ABCD'

## Strides are Good

Use a stride value of two on the following string :

In [6]:

```
Good="GsoAo+d"  
Good[::2]
```

Out[6]:

'Good'

## uppercase to UPPERCASE

Convert the following string to uppercase using the method `upper()`

In [3]:

```
u = "uppercase"  
u.upper()
```

Out[3]:

'UPPERCASE'
