Hello World

Let's say Hello to the world with a PRINT statement. E.g. print("Hello World") . Why not give it a try put in a print statement in the cell bellow. Don't forget to do shift+ **enter** to run the cell:

In [1]:

```python
print("Hello World")
```

Hello World

Say Hello World on two lines

Let's print Hello and World on two separate lines. Hint: \n in the middle of the string acts as a new line character. E.g. print("line 1\nline 2") . Let's try it now. Type in a print statement in the cell bellow. Don't forget to do shift+ **enter** to run the cell:

In [2]:

```python
print("Hello\nWorld")
```

Hello
World

Comments are key to good coding

In python, comments are created by putting a hash mark # in front of the text of the comment. E.g. # this is a comment

In [3]:

```python
# this is a comment
```
